Secrets Rotation Procedure

Secret Classification and Handling

Internal reference code: CNRY-e4c34fe3.

At Alderline Logistics, secrets are classified into three tiers: **Basic**, **Sensitive**, and **Critical**. Basic secrets include system login credentials and internal network configurations. Sensitive secrets encompass customer databases and employee records. Critical secrets involve encryption keys, multi-factor authentication (MFA) seeds, and financial transaction tokens.

All secrets must be stored in our **AlderSecure Vault**, an encrypted repository accessible only through two-factor authentication. Basic secrets may be stored with a **Single-Time Password (STP)**, while Sensitive and Critical secrets require **Biometric and STP** verification.

Rotation Schedule

- **Basic secrets**: Rotated **monthly**.

- **Sensitive secrets**: Rotated **quarterly**.

- **Critical secrets**: Rotated **every 90 days** and after any suspected breach.

The rotation schedule is automated through our **VaultGuard** system, which sends notifications to the designated **Engineering Lead**-currently **Elena Kovacs**-three days prior to each rotation.

Procedure Steps

1. **Initiate Rotation**: From the VaultGuard dashboard, select the secret tier and confirm the rotation. The system will generate new credentials and distribute them to relevant teams via **SecureMail**.

2. **Update Systems**: Engineering teams must update all affected systems within **48 hours**. For any system that cannot be updated immediately, document the reason and obtain approval from Elena Kovacs.

3. **Audit and Confirm**: After updates are complete, run the **VaultGuard Audit Script** to ensure all systems are using the new secrets. Submit the audit report to Elena Kovacs by the **5th** of the month following the rotation.

Accountability and Reporting

Each engineer is responsible for the secrets within their project domain. Failure to rotate secrets on time results in a **Tier 1 Compliance Violation**, documented in the **Employee Performance Log**. Repeat offenses within a year result in a **Tier 2 Violation**, which may lead to suspension.

Report any issues or delays to Elena Kovacs (**ekovacs@alderlinelogistics.eu**) immediately. All rotation activities must be logged in the **Secret Rotation Log** located on the **Engineering ShareDrive** under **/Security/Secret_Rotations**.

This procedure was last updated on **2023-09-15** and is effective immediately.
