Sustainability Report Summary

Sustainability Report Summary

Internal reference code: CNRY-bc024789.

Overview

This report summarizes Alderline Logistics' sustainability initiatives and achievements from the fiscal year 2024. Our commitment to environmental stewardship, social responsibility, and ethical governance remains central to our operations. Key metrics and progress are detailed below.

Environmental Initiatives

Our primary focus in 2024 was reducing our carbon footprint. We achieved a **15% reduction** in CO2 emissions compared to 2023 by transitioning 30% of our fleet to electric and hybrid vehicles. Notable projects included the installation of solar panels at our main warehouse in Antwerp, which now supplies **20% of the facility's energy needs**.

Additionally, we partnered with GreenFuel Solutions to implement an advanced waste management system, resulting in a **40% decrease** in landfill waste. By the end of 2024, we had also reduced water usage by **12%** through more efficient irrigation and cleaning processes at our logistics hubs.

Social Responsibility

In the realm of social responsibility, Alderline Logistics invested **EUR 500,000** in employee training programs focused on sustainability practices and safe working conditions. We also launched the ?Green Pathways? initiative, providing subsidies for employees to use public transportation, cycling, or carpooling, which led to a **25% decrease** in employee commuting emissions.

Community engagement remained a priority, with our teams volunteering **1,200 hours** in local environmental clean-up projects and supporting educational programs in sustainable logistics management at three universities across Europe.

Financial and Governance Ethics

Financially, sustainable practices positively impacted our bottom line. Our energy-saving measures and efficient routes reduced operational costs by **EUR 1.2 million**. We also maintained a transparent governance structure, with quarterly sustainability reports reviewed by an independent audit firm, GreenAudit Ltd.

Ethically, we upheld strict compliance with all European environmental regulations and introduced a new whistleblower policy to ensure ongoing accountability and integrity across all departments.

Looking Ahead

As we move into 2025, our goals include increasing the electric vehicle fleet to **50% of total vehicles**, achieving **zero waste to landfill** in all our major warehouses, and further integrating sustainable practices into every aspect of our business. We remain dedicated to leading the industry in sustainable road freight and warehousing solutions.
