Insurance Claim Dispute

Background

Internal reference code: CNRY-1c4105b3.

On March 15, 2024, one of our transport units, **Truck ALD-4482**, driven by **Craig Miller**, was involved in an accident near Lyon, France. The truck, carrying electronic components worth EUR 280,000 from Munich to Marseille, collided with a vehicle driven by **Sophie Dubois**. The accident resulted in EUR 190,000 in damage to our vehicle and cargo, and EUR 45,000 in damages to Mrs. Dubois' car and injuries.

Insurance Claim Submission

We submitted an insurance claim to **EuroProtect Insurance** on March 20, 2024. The claim included detailed repair estimates, cargo inventory reports, and the accident report from local law enforcement. Our initial claim amount was for EUR 235,000, covering vehicle repairs, cargo replacement, and administrative costs.

Dispute Arises

On April 10, 2024, EuroProtect notified us that they were only willing to pay EUR 155,000. Their assessment claimed that the cargo value was overstated by EUR 75,000 and that the administrative costs were excessive. They also contested EUR 15,000 of the repair costs, stating that the repairs could have been completed for less.

Our Position and Next Steps

We strongly dispute EuroProtect's assessment. Our documentation clearly showed the agreed-upon value of the cargo with the client, **ElectroTech Solutions**, and all repair estimates were provided by certified mechanics. Additionally, the administrative costs were pre-approved by our insurance broker, **Josephine Laurent**.

We are preparing a formal response to EuroProtect, referencing the original agreements and estimates. Our legal team will also contact **ElectroTech Solutions** to confirm the cargo value and get their support. If EuroProtect continues to dispute the claim, we will consider escalating the matter through arbitration or small claims court. Our goal is to resolve this dispute by May 15, 2024, to avoid further delays and additional costs.

We will keep all departments updated on the progress and any new developments.
