Secrets Rotation Procedure

Secrets Rotation Procedure

Internal reference code: CNRY-e6ecf496.

Department: Engineering

Effective Date: January 15, 2025

This document outlines the procedure for rotating critical secrets within the Brightmoor Foods engineering department. Adherence to this protocol ensures the security and integrity of our systems.

Scope
This procedure applies to all engineering staff members handling production secrets, including but not limited to database credentials, API keys, and encryption keys. It covers systems managed on our AWS and on-premise servers.

Secret Classification and Rotation Schedule

1. **High-Sensitivity Secrets**
   - Examples: Production database credentials, payment gateway API keys.
   - Rotation Frequency: **Every 90 days**.
   - Last Rotation: October 1, 2024.
   - Next Rotation: **January 1, 2025**.

2. **Medium-Sensitivity Secrets**
   - Examples: Service account keys, internal API keys.
   - Rotation Frequency: **Every 180 days**.
   - Last Rotation: July 1, 2024.
   - Next Rotation: **January 1, 2025**.

3. **Low-Sensitivity Secrets**
   - Examples: Development environment credentials, logging keys.
   - Rotation Frequency: **Annually**.
   - Last Rotation: January 1, 2024.
   - Next Rotation: **January 1, 2025**.

Rotation Process

Step 1: Preparation
- **Two weeks prior** to the rotation date, the responsible engineer must notify the Security Team via email (security@brightmoorfoods.com) and update the **Secret Management Tracker** in JIRA (Project: SEC, Board: Secret Rotation).

Step 2: Rotation Execution
- Use the **AWS Secrets Manager** or **HashiCorp Vault** to generate new secrets.
- Update all relevant systems and services with the new secrets.
- Test the systems to ensure proper functionality.

Step 3: Documentation and Reporting
- Document the rotation in the **Secret Rotation Log** (SharePoint: /Engineering/Security/Secret_Rotation_Log).
- Email the Security Team confirming the completion of the rotation.
