Sustainability Report Summary

Sustainability Report Summary

Internal reference code: CNRY-5e469120.

Overview

This report summarizes Brightmoor Foods' sustainability initiatives from the fiscal year 2024, which ran from **January 1, 2024, to December 31, 2024**. Our efforts are centered around reducing our environmental footprint, enhancing social responsibility, and ensuring economic viability.

Environmental Impact

Our primary environmental goal was to reduce greenhouse gas emissions by **15%** compared to 2023. We are proud to announce that we surpassed this target, achieving a **17%** reduction. This was accomplished through several key strategies:

- **Renewable Energy:** We increased our usage of renewable energy sources from **45%** to **60%** of our total energy consumption by installing additional solar panels at our main production facility in **Munich** and purchasing renewable energy credits.
- **Waste Reduction:** We reduced waste by **20%** through improved recycling programs and by reducing packaging materials. Our food waste decreased by **25%** due to better inventory management and donation programs.
- **Water Conservation:** We cut water usage by **18%** by implementing water-saving technologies and fixing leaks promptly.

Social Responsibility

In 2024, we focused on enhancing our community engagement and improving our employees' welfare:

- **Community Engagement:** We donated **EUR 500,000** to local food banks and educational programs across Europe. Additionally, our employees volunteered **5,000 hours** in community service activities.
- **Employee Welfare:** We introduced a new wellness program that includes mental health support, gym subsidies, and flexible working hours. As a result, employee satisfaction scores improved by **10%**.

Economic Viability

Sustainability initiatives not only benefit the environment and society but also our bottom line. In 2024, our sustainable practices led to **EUR 2 million** in cost savings through reduced energy bills, lower waste disposal costs, and improved operational efficiency. We also attracted **EUR 10 million** in new investments from ESG-focused funds.

We are committed to continuing these efforts in 2025 and beyond, aiming for even greater reductions in our environmental impact and further enhancements in social responsibility and economic viability.
